

Application Summary Report

AppScore Demo
Dec 2, 2021 5:03 PM

Introduction

This report provides a summary of the AppScore assessment covering 54 applications comprising 275 servers across 4 datacenters.

The applications were assessed by the AppScore platform bringing together business, application and technical data. Each application has been scored for Risk and Complexity in its current environment. An assessment against the 7Rs model was made to determine the possible migration or transformation routes to cloud. Each of the options identified as suitable has been scored for Risk, Complexity and Benefit of transformation.

Overall Summary
